Practicing Leachate Recirculation and Air Injection Chapter 1 Project Description and Objectives 1. 1 Background There has been much concern over the potential hazards of landfill gas emissions. The predominant component of landfill gas emissions is methane, which is highly flammable and has been identified as a major greenhouse gas implicated in global warm ing. Another issue with landfill emissions is odor nuisance complaints due to trace constituents. Recently, research has begun on operating bioreactor landfills. The bioreactor process involves the injection of liquid such as leachate or sludge into the Figure 1-1. Survey Area at the Three Rivers waste mass. In the case of aerobic bioreactor land Landfill. fills, air is injected into the waste mass in addition to the liquid to induce aerobic microorganisms to de time, injecting air into the waste in order to stimulate grade the waste more rapidly. The goals of this aerobic conditions within the landfill to initiate...
