Programming .NET Web Services

By Alex Ferrara, Matthew MacDonald

O Reilly Media, Inc, USA, United States, 2002. Paperback. Book Condition: New. 230 x 178 mm. Language: English . Brand New Book. Web services are poised to become a key technology for a wide range of Internet-enabled applications, spanning everything from straight B2B systems to mobile devices and proprietary in-house software. While there are several tools and platforms that can be used for building web services, developers are finding a powerful tool in Microsoft s Framework and Visual Studio . Designed from scratch to support the development of web services, the Framework simplifies the process-- programmers find that tasks that took an hour using the SOAP Toolkit take just minutes. Programming Web Services is a comprehensive tutorial that teaches you the skills needed to develop web services hosted on the platform. Written for experienced programmers, this book takes you beyond the obvious functionality of ASP or Visual Studio to give you a solid foundation in the building blocks of web services, and leads you step-by-step through the process of creating your own. Beginning with a close look at the underlying technologies of web services, including the benefits and limitations, Programming Web Services discusses the unique features of the .N ET Framework...
